

## Design Discussion

My website will satisfy the audience's expectations by displaying all my work in a neat and technical way. With a wide range of targeted audiences I will have to accommodate for all of them, such as class members, teachers, family and the curriculum council.

My website will consist of the appropriate pages, home, about me, and a general content page. On my home page I will create an artistic banner with my name number and graphic image that looks well and suits the purpose of the website. The graphic that I made has a sun set as a background with two blacked out dancers in the middle. I choose to make my banner like this because it looks good and it reaches the expectations of my target audiences, by being difficult to create but the final product is worth it.

The work that will be displayed in my website are things like what I have create in flash and Photoshop. This type of work has to be in here because my teacher and the curriculum council would like to see what I have been doing and the progress that I have made. It would also be good to show off my final projects to my friends and family, who would also be interested in what I have been doing during school.

With the information that I put in my website I will be checking the grammar and syntax, to provide a higher quality of work. My paragraphs will be set out in a logical manner and all my images will have appropriate blurbs underneath them. My font will be Arial because it is nice, round and clearly readable.
